## Description of Task-1

### Task-1

Focus on CFD computations using the resolved geometry of the rotor, with large scale effects in the form of turbulent inflow and yaw, and blade scale laminar/turbulent transition.

The original plan was to base the work on the DAN-AERO and Siemens Boulder exp.

Expected results:

Comparison of state of the art turbulence models with multi-scale aerodynamic data. Development of phenomenological 'engineering' models describing dynamic stall and yaw.

Partners (Risø-DTU, LM-Glasfiber, Mek-DTU, Siemens, Vestas)

## Task-1

The following milestones were defined within the present package, or are related to the work

- ◆ M1: Parametric study of two modern turbines in atmospheric shear.  
**Month 12**
- ◆ M2: Evaluation of the importance of cross flow instabilities for modern wind turbine rotors. **Month 24**
- ◆ M3: Parametric study of two modern turbines in yaw. **Month 24**
- ◆ M4: Development of refined 'engineering' yaw model. **Month 36**
- ◆ M5: Evaluation of dynamic stall models and airfoil characteristics with respect to dynamic inflow and inflow turbulence. **Month 48**
- ◆ M6: Simulation of various unsteady inflow conditions for the NM80.  
**Month 36**
- ◆ M12: Parametric study of wake/wake interaction between two or more turbines. **Month 36**

## Milestones

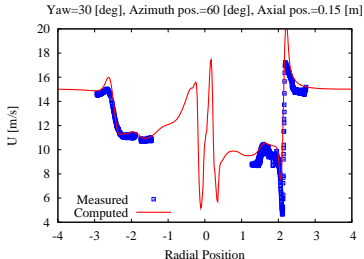

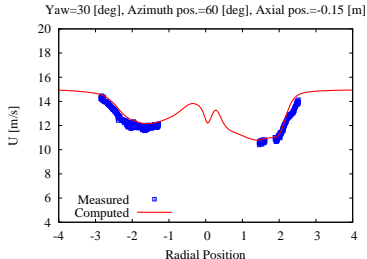

### Actual activities, 2009-2011

- ◆ Mexico axial flow cases, investigating differences with measurements
- ◆ Mexico yaw cases
- ◆ NREL Phase-VI dynamic stall computations during standstill
- ◆ Rotors in partial wake and in shear
- ◆ Identifying and extracting data sets from the DAN-AERO exp.
- ◆ Comparison of AD, AL and CFD with RG
- ◆ Computation of CFD of RG using turbulent inflow
- ◆ Grid generation for rotors

# Results

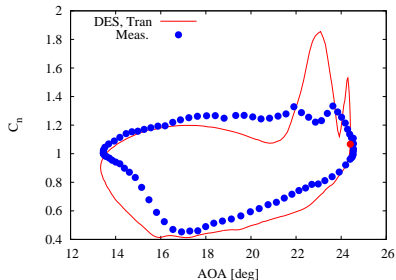

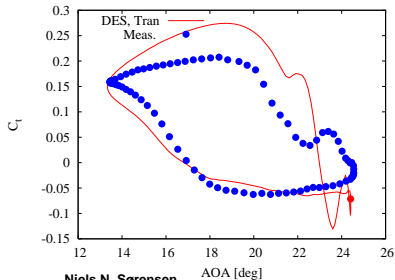

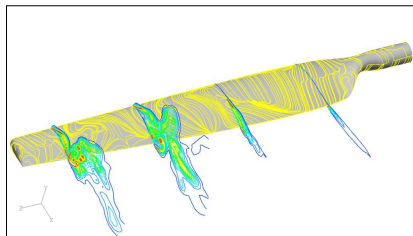

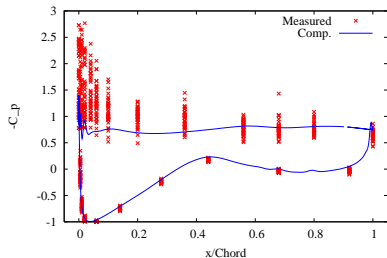

## MEXICO, yaw angle 30 degrees, 15 m/s

Up and downstream radial traverses in the horizontal plane  
Rotor azimuth position=60 deg.

## Dynamic Stall, NREL Phase-VI Standstill, $r/R=0.80$

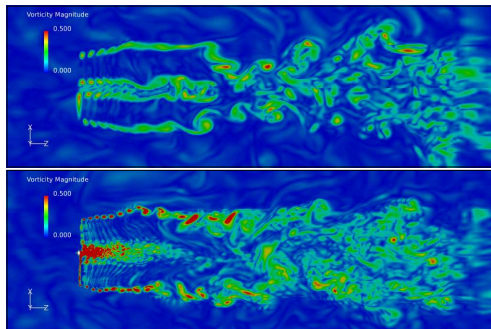

Phase Angle = 90

## Results

### Comparison of GR, AD and AL technique

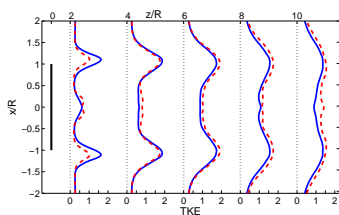

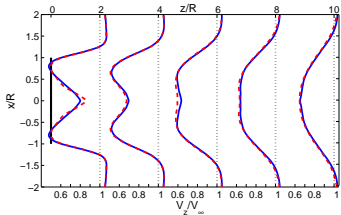

Comparison of AL and GR rotor computations in turbulent inflow.  
AL top, GR bottom.

## Comparison of GR, AD and AL technique

Comparison of AL and GR rotor computations in turbulent inflow.  
AL in blue, GR in red.

## Planned Activities

### Planned activities 2012

The focus will be on catching up on the delayed milestones for CFD simulations with resolved geometry, M1, M2 and M3.

- ◆ Mesh generation for the NM80 and Siemens rotor, March-April.
- ◆ Parametric computations of rotors in atmospheric shear for the milestone M1, April-May.
- ◆ Study of the influence of transition, milestone M2, May-June.
- ◆ Simulation of the NM80 in unsteady inflow, M4, Sep-Dec.
- ◆ Yaw studies of two modern turbine, milestone M3, July-Sep.

### Status on Ph.D. Enrolment

- ◆ Analysis of Wind Turbine Aerodynamics and Aeroelasticity Using Vortex Based Methods, April-May 2012.
- ◆ Multiple Wind turbine Wakes, 01-11 2011.
- ◆ Flow of air over complex forested terrain, 01-11 2011.
- ◆ Development of Efficient Turbulence Models for CFD Wake Simulations, 15-12 2011.

## International Dimension

### International Dimension

- ◆ Close collaboration with NREL, regarding dynamic stall and static stall.
- ◆ Large effort to explore the unique MEXICO data set, in close collaboration with ECN.
- ◆ Participation in the Wake Bench project.
- ◆ Participation in the MexNext II project.
- ◆ Plans for participation in the new INNWIND European project.

## Miscellaneous

### Other Business

- ◆ Activities have been delayed due to confidentiality issues.
- ◆ We have settled the business with Vestas regarding the terrain/forrest modelling, but implementation at Vestas is still pending.
- ◆ There is a strong synergy between the activities in the flow center and the activities in the Wasp-CFD project.
